Neuromotor Immaturity in Children and Adults: The INPP Screening Test for Clinicians and Health Practitioners By Sally Goddard Blythe

Available to healthcare professionals for the first time, this book contains proven screening tests to measure neuromotor immaturity in children and adults in order to provide a basis for referral and help.

- Allows practitioners to screen for disorders of movement that can negatively affect educational performance and emotional function in children and adolescents
- Assesses instances where disorders of movement in adults are affecting thoughts and behavior, as in panic disorder
- Provides a novel approach for health care professionals observing aberrant reflexes in the absence of more serious pathology
- Includes reproducible scoring and observation sheets for practice and serves as the perfect complement to *Assessing Neuromotor Readiness for Learning*

Editorial Review

Review

"This book is a good starting point for clinicians for assessing neuromotor immaturities. It will help you to understand the current neurological status of your patient and the need for further assessment, therapy or referral." Pregnancy and Paediatrics Faculty of the Royal College of Chiropractors Newsletter, February 2015

From the Back Cover

Undiagnosed neuromotor immaturity is increasingly being held responsible for a broad range of symptoms, including anxiety, behavioral disorders, and learning difficulties. Available to healthcare professionals for the first time, this book contains proven screening tests to measure neuromotor immaturity in children and adults in order to provide a basis for referral and help. Based on the pioneering work of Sally Goddard Blythe and the Institute for Neuro-Physiological Psychology, it provides reproducible scoring and observation sheets for use in practice.

The screening tests allow healthcare practitioners to assess disorders of movement that can negatively affect educational performance and emotional function in children and adolescents, as well as the thoughts and behavior of adults. It is a novel approach for healthcare professionals who observe aberrant reflexes in their patients in the absence of more serious pathology. The perfect complement to *Assessing Neuromotor Readiness for Learning*, these tests makes new resources and information available to patients who are often overlooked by standard clinical and educational services.

About the Author

Sally Goddard Blythe is International Director of The Institute for Neuro-Physiological Psychology (INPP) in Chester, UK. She is the author of seven books on child development, including *Assessing Neuromotor Readiness for Learning: The INPP Developmental Screening Test and School Intervention Programme* (Wiley-Blackwell, 2012), *The Genius of Natural Childhood* (2011), and *Attention, Balance and Coordination: The A.B.C. of Learning Success* (Wiley-Blackwell, 2009).

Users Review
