Biostatistics in Public Health Using STATA By Erick L. Suárez, Cynthia M. Pérez, Graciela M. Noguera, Camille Moreno-Gorrín

Striking a balance between theory, application, and programming, **Biostatistics in Public Health Using STATA** is a user-friendly guide to applied statistical analysis in public health using STATA version 14. The book supplies public health practitioners and students with the opportunity to gain expertise in the application of statistics in epidemiologic studies.

The book shares the authors' insights gathered through decades of collective experience teaching in the academic programs of biostatistics and epidemiology. Maintaining a focus on the application of statistics in public health, it facilitates a clear understanding of the basic commands of STATA for reading and saving databases.

The book includes coverage of data description, graph construction, significance tests, linear regression models, analysis of variance, categorical data analysis, logistic regression model, poisson regression model, survival analysis, analysis of correlated data, and advanced programming in STATA.

Each chapter is based on one or more research problems linked to public health. Additionally, every chapter includes exercise sets for practicing concepts and exercise solutions for self or group study. Several examples are presented that illustrate the applications of the statistical method in the health sciences using epidemiologic study designs.

Presenting high-level statistics in an accessible manner across research fields in public health, this book is suitable for use as a textbook for biostatistics and epidemiology courses or for consulting the statistical applications in public health.

For readers new to STATA, the first three chapters should be read sequentially, as they form the basis of an introductory course to this software.

Editorial Review

About the Author

Erick L. Suárez is a professor of biostatistics in the Department of Biostatistics and Epidemiology at the University of Puerto Rico Graduate School of Public Health. He has more than 25 years of experience teaching biostatistics at the graduate level and has co-authored more than 75 peer-reviewed publications in chronic and infectious diseases. Dr. Suarez has been a co-investigator of several NIH-funded grants related to cancer, HPV, HCV, and diabetes. He has extensive experience in statistical consulting with biomedical researchers, particularly in the analysis of microarrays data in breast cancer.

Cynthia M. Pérez is a professor of epidemiology in the Department of Biostatistics and Epidemiology at the University of Puerto Rico Graduate School of Public Health. She has taught epidemiology and biostatistics for over 20 years. She has also directed efforts in mentoring and training to public health and medical students at the University of Puerto Rico. She has been the principal investigator or co-investigator of research grants in diverse areas of public health including diabetes, metabolic syndrome, periodontal disease, viral hepatitis, and HPV infection. She is the author or co-author of more than 75 peer-reviewed publications.

Graciela M. Nogueras is a statistical analyst at the University of Texas MD Anderson Cancer Center in Houston, Texas. She is currently enrolled in the PhD program in biostatistics at the University of Texas?Graduate School of Public Health. She has co-authored more than 30 peer-reviewed publications. For the past nine years, she has been performing statistical analyses for clinical and basic science researchers. She has been assisting with the design of clinical trials and animal research studies, performing sample size calculations, and writing the clinical trial reports of clinical trial progress and interim analyses of efficacy and safety data to the University of Texas MD Anderson Data and Safety Monitoring Board.

Camille Moreno-Gorrín is a graduate of the Master of Science Program in Epidemiology at the University of Puerto Rico Graduate School of Public Health. During her graduate studies, she was a research assistant at the Comprehensive Cancer Center of the University of Puerto Rico where she co-authored several articles in biomedical journals. She also worked as a research coordinator for the HIV/AIDS Surveillance System of the Puerto Rico Department of Health, where she conducted research on intervention programs to link HIV patients to care.

Users Review

From reader reviews:

Charles Duda:

The book Biostatistics in Public Health Using STATA can give more knowledge and information about everything you want. Why must we leave the great thing like a book Biostatistics in Public Health Using STATA? A few of you have a different opinion about guide. But one aim which book can give many facts for us. It is absolutely proper. Right now, try to closer with your book. Knowledge or data that you take for that, you are able to give for each other; you may share all of these. Book Biostatistics in Public Health Using STATA has simple shape but the truth is know: it has great and massive function for you. You can look the enormous world by open and read a publication. So it is very wonderful.

Shawn Holmes:

Does one of the book lovers? If yes, do you ever feeling doubt if you find yourself in the book store? Attempt to pick one book that you just don't know the inside because don't evaluate book by its protect may doesn't work this is difficult job because you are afraid that the inside maybe not since fantastic as in the outside appearance likes. Maybe your answer could be Biostatistics in Public Health Using STATA why because the wonderful cover that make you consider with regards to the content will not disappoint anyone. The inside or content is actually fantastic as the outside or cover. Your reading 6th sense will directly show you to pick up this book.

Ernestine Worrell:

That publication can make you to feel relax. This kind of book Biostatistics in Public Health Using STATA was vibrant and of course has pictures on there. As we know that book Biostatistics in Public Health Using STATA has many kinds or genre. Start from kids until young adults. For example Naruto or Private investigator Conan you can read and think you are the character on there. Therefore, not at all of book usually are make you bored, any it can make you feel happy, fun and relax. Try to choose the best book for you and try to like reading that.

Valeria May:

As a university student exactly feel bored in order to reading. If their teacher inquired them to go to the library or to make summary for some guide, they are complained. Just small students that has reading's soul or real their passion. They just do what the educator want, like asked to go to the library. They go to generally there but nothing reading critically. Any students feel that reading is not important, boring as well as can't see colorful pictures on there. Yeah, it is to get complicated. Book is very important for you personally. As we know that on this period of time, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. So, this Biostatistics in Public Health Using STATA can make you really feel more interested to read.
