Autonomous Vehicle Navigation: From Behavioral to Hybrid Multi-Controller Architectures By Lounis Adouane

Improve the Safety, Flexibility, and Reliability of Autonomous Navigation in Complex Environments

Autonomous Vehicle Navigation: From Behavioral to Hybrid Multi-Controller Architectures explores the use of multi-controller architectures in fully autonomous robot navigation?even in highly dynamic and cluttered environments. Accessible to researchers and graduate students involved in mobile robotics and fully autonomous vehicle navigation, the book presents novel techniques and concepts that address different complex mobile robot tasks.

The author examines the development of reliable elementary controllers and proposes mechanisms to manage the interaction of these multi-controller architectures while addressing different constraints and enhancing metrics/criteria linked to the safety, flexibility, and reliability of the proposed control architectures. He covers the modeling of subtasks, reliable obstacle avoidance, appropriate stable control laws for target reaching/tracking, short- and long-term trajectory/waypoint planning, navigation through sequential waypoints, and the cooperative control and interaction of a group of mobile robots. The author's website provides MATLAB® and Simulink® source code of the main procedures related to the task modeling, planning, and control of mobile robots. It also includes videos showing the main simulations and experiments given in the text.

In addition to flexible and bottom-up construction, multi-controller architectures can be formally analyzed to achieve reliable navigation in complex environments. This book reveals innovative control architectures that can lead to fully autonomous vehicle navigation in these challenging situations.

Editorial Review

About the Author

Lounis Adouane is an associate professor at the Institut Pascal - Polytech Clermont-Ferrand in France. He received an MS in 2001 from IRCCyN-ECN Nantes, where he worked on the control of legged mobile robotics. In 2005, he obtained a PhD in automatic control from FEMTO-ST laboratory-UFC Besançon. During his PhD studies, he deeply investigated the field of multi-robot systems, especially those related to bottom-up and hybrid control architectures. Dr. Adouane's current research topics are related to both autonomous navigation of mobile robots in complex environments and cooperative control architectures for multi-robot systems. More specifically, his main research include planning and control, hybrid multi-controller architectures, obstacle avoidance, cooperative robotics, artificial intelligence (such as Markov decision process, multi-agent systems, and fuzzy logic), and multi-robot/agent simulation. He is the author/coauthor of more than 60 refereed international papers on these topics.

Users Review

From reader reviews:

Carrie Rivas:

Book will be written, printed, or created for everything. You can learn everything you want by a reserve. Book has a different type. As it is known to us that book is important issue to bring us around the world. Beside that you can your reading expertise was fluently. A book Autonomous Vehicle Navigation: From Behavioral to Hybrid Multi-Controller Architectures will make you to possibly be smarter. You can feel more confidence if you can know about everything. But some of you think in which open or reading some sort of book make you bored. It is not make you fun. Why they might be thought like that? Have you trying to find best book or ideal book with you?

Yolanda Ocasio:

As people who live in the modest era should be revise about what going on or data even knowledge to make them keep up with the era which can be always change and move ahead. Some of you maybe can update themselves by reading books. It is a good choice for you but the problems coming to anyone is you don't know which you should start with. This Autonomous Vehicle Navigation: From Behavioral to Hybrid Multi-Controller Architectures is our recommendation so you keep up with the world. Why, as this book serves what you want and want in this era.

Jesse Mansell:

Now a day people who Living in the era exactly where everything reachable by talk with the internet and the resources within it can be true or not require people to be aware of each info they get. How people have to be

smart in receiving any information nowadays? Of course the answer then is reading a book. Reading through a book can help men and women out of this uncertainty Information specifically this Autonomous Vehicle Navigation: From Behavioral to Hybrid Multi-Controller Architectures book because this book offers you rich data and knowledge. Of course the details in this book hundred pct guarantees there is no doubt in it you may already know.

Malcolm Moser:

Reading a book being new life style in this season; every people loves to go through a book. When you learn a book you can get a lots of benefit. When you read ebooks, you can improve your knowledge, since book has a lot of information into it. The information that you will get depend on what sorts of book that you have read. If you wish to get information about your research, you can read education books, but if you act like you want to entertain yourself you can read a fiction books, such us novel, comics, and soon. The Autonomous Vehicle Navigation: From Behavioral to Hybrid Multi-Controller Architectures will give you a new experience in reading a book.
