Condition Monitoring Using Computational Intelligence Methods: Applications in Mechanical and Electrical Systems

By Tshilidzi Marwala

Condition Monitoring Using Computational Intelligence Methods: Applications in Mechanical and Electrical Systems By Tshilidzi Marwala

Condition Monitoring Using Computational Intelligence Methods promotes the various approaches gathered under the umbrella of computational intelligence to show how condition monitoring can be used to avoid equipment failures and lengthen its useful life, minimize downtime and reduce maintenance costs. The text introduces various signal-processing and pre-processing techniques, wavelets and principal component analysis, for example, together with their uses in condition monitoring and details the development of effective feature extraction techniques classified into frequency-, time-frequency- and time-domain analysis. Data generated by these techniques can then be used for condition classification employing tools such as:

-

fuzzy systems; rough and neuro-rough sets; neural and Bayesian networks;hidden Markov and Gaussian mixture models; and support vector machines.

Editorial Review

From the Back Cover

Condition monitoring uses the observed operating characteristics of a machine or structure to diagnose trends in the signal being monitored and to predict the need for maintenance before a breakdown occurs. This reduces the risk, inherent in a fixed maintenance schedule, of performing maintenance needlessly early or of having a machine fail before maintenance is due either of which can be expensive with the latter also posing a risk of serious accident especially in systems like aeroengines in which a catastrophic failure would put lives at risk. The technique also measures responses from the whole of the system under observation so it can detect the effects of faults which might be hidden deep within a system, hidden from traditional methods of inspection.

Condition Monitoring Using Computational Intelligence Methods promotes the various approaches gathered under the umbrella of computational intelligence to show how condition monitoring can be used to avoid equipment failures and lengthen its useful life, minimize downtime and reduce maintenance costs. The text introduces various signal-processing and pre-processing techniques, wavelets and principal component analysis, for example, together with their uses in condition monitoring and details the development of effective feature extraction techniques classified into frequency-, time-frequency- and time-domain analysis. Data generated by these techniques can then be used for condition classification employing tools such as:

· fuzzy systems;

· rough and neuro-rough sets;

· neural and Bayesian networks;

· hidden Markov and Gaussian mixture models; and

· support vector machines.

On-line learning methods such as Learn++ and ILUGA (incremental learning using genetic algorithms) are used to enable the classifiers to take on additional information and adjust to new condition classes by evolution rather than by complete retraining. Both the chosen methods have good incremental learning abilities with ILUGA, in particular, not suffering from catastrophic forgetting.

Researchers studying computational intelligence and its applications will find *Condition Monitoring Using Computational Intelligence Methods* to be an excellent source of examples. Graduate students studying condition monitoring and diagnosis will find this alternative approach to the problem of interest and practitioners involved in fault diagnosis will be able to use these methods for the benefit of their machines and of their companies.

About the Author

Tshilidzi Marwala is the Executive Dean of the Faculty of Engineering and the Built Environment at the University of Johannesburg. He was previously a full Professor of Electrical Engineering as well as the Carl

and Emily Fuchs Chair of Systems and Control Engineering at the University of the Witwatersrand. He is a Fellow of the Royal Society of Arts as well as the Royal Statistical Society and a Senior Member of both the IEEE and the ACM. He holds a PhD in Engineering from the University of Cambridge and a PLD from Harvard University in the USA. He was a post-doctoral research associate at Imperial College (London) working in the general area of computational intelligence. He was a visiting fellow at Harvard University and Cambridge University. His research interests include the application of computational intelligence to mechanical. civil, aerospace and biomedical engineering.

Professor Marwala has made fundamental contributions to engineering including the development of the concept of pseudo-modal energies and the development of the Bayesian framework for solving engineering problems such as finite-element-model updating. He has supervised 40 masters and PhD students many of whom have proceeded to distinguish themselves at universities such as Harvard, Oxford and Cambridge. He has published over 200 papers in archival journals, proceedings and book chapters and holds 3 patents. He has published three books: Computational Intelligence for Modelling Complex Systems published by Research India Publications, Computational Intelligence for Missing Data Imputation, Estimation, and Management: Knowledge Optimization Techniques published by the IGI Global Publications (New York) and Finite Element Model Updating Using Computational Intelligence published by Springer (2010); he has a fourth, Conflict Modeling Using Computational Intelligence under contract with Springer's computer science list. He is the Associate Editor of 4 journals including the International Journal of Systems Science and his work has appeared in prestigious publications such as New Scientist.

Users Review

From reader reviews:

Lucille Davis:

This Condition Monitoring Using Computational Intelligence Methods: Applications in Mechanical and Electrical Systems usually are reliable for you who want to be described as a successful person, why. The reason why of this Condition Monitoring Using Computational Intelligence Methods: Applications in Mechanical and Electrical Systems can be among the great books you must have will be giving you more than just simple looking at food but feed you with information that possibly will shock your prior knowledge. This book will be handy, you can bring it everywhere you go and whenever your conditions in e-book and printed versions. Beside that this Condition Monitoring Using Computational Intelligence Methods: Applications in Mechanical and Electrical Systems forcing you to have an enormous of experience such as rich vocabulary, giving you test of critical thinking that we understand it useful in your day task. So , let's have it and enjoy reading.

Paul Hardy:

The reserve with title Condition Monitoring Using Computational Intelligence Methods: Applications in Mechanical and Electrical Systems contains a lot of information that you can study it. You can get a lot of advantage after read this book. That book exist new understanding the information that exist in this book represented the condition of the world now. That is important to yo7u to be aware of how the improvement of the world. This particular book will bring you with new era of the globalization. You can read the e-book on your own smart phone, so you can read the item anywhere you want.

Patrick Allen:

This Condition Monitoring Using Computational Intelligence Methods: Applications in Mechanical and Electrical Systems is completely new way for you who has attention to look for some information as it relief your hunger associated with. Getting deeper you on it getting knowledge more you know or else you who still having little digest in reading this Condition Monitoring Using Computational Intelligence Methods: Applications in Mechanical and Electrical Systems can be the light food in your case because the information inside this specific book is easy to get by means of anyone. These books acquire itself in the form that is reachable by anyone, that's why I mean in the e-book web form. People who think that in guide form make them feel tired even dizzy this guide is the answer. So there is absolutely no in reading a publication especially this one. You can find what you are looking for. It should be here for a person. So , don't miss this! Just read this e-book style for your better life and knowledge.

Iva Simmon:

Reading a reserve make you to get more knowledge from the jawhorse. You can take knowledge and information from your book. Book is composed or printed or highlighted from each source which filled update of news. In this particular modern era like right now, many ways to get information are available for anyone. From media social similar to newspaper, magazines, science e-book, encyclopedia, reference book, novel and comic. You can add your knowledge by that book. Isn't it time to spend your spare time to spread out your book? Or just searching for the Condition Monitoring Using Computational Intelligence Methods: Applications in Mechanical and Electrical Systems when you required it?
